core/ test suite

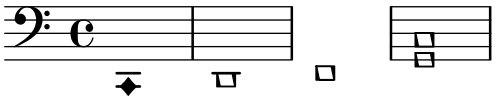

1. Notation vocabulary. Expect: pont./ord./tasto/sim. markups; circled-tip hairpins; arrow-span text spanner with arrow; \ss removes staff+ledger lines for 4 notes; repeat barlines .|::|.; 'scord.' text label 'ADGD'.

1

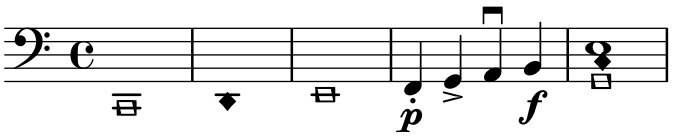

2. Legacy \square / \half-harmonic (prefix). Expect: diamond, square, square (inside \ss, no staff lines), then a chord where BOTH notes go square -- no per-note independence, that's the known limitation of the legacy prefix form (see score 2b for the fix).

2

2b. New suffix \squareHead / \halfHarmonic / \air. Expect: square, diamond, square, then dot/accent/downbow/f render normally alongside, then a chord = oval + diamond + square all independent.

2b

2c. Duration matrix (quarter/half/whole). Expect: quarter = filled square vs. filled oval -- compare SHARP CORNERS to a ROUND curve, ink alone looks similar. Half/whole = open square vs. open oval. Diamonds stay filled at every duration (harmonic convention).

2c

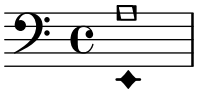

2d. \ss and ties/slurs across contact articulations. Expect: tiny square with NO staff/ledger lines around it; two squares joined by a TIE curve; two diamonds joined by a SLUR curve.

2d

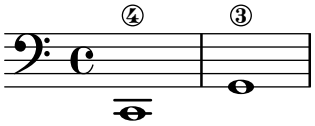

2e. Two StringVoices, different articulations, same instant. Expect: TOP = square, BOTTOM = diamond -- two DIFFERENT shapes. If both notes show the same shape, the per-Voice fix has regressed (see strings.ily).

2e

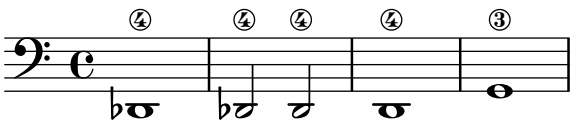

3. Scordatura, fingered mode (default). Expect: plain notes, NO accidental, string numbers 4/3 shown above.

3

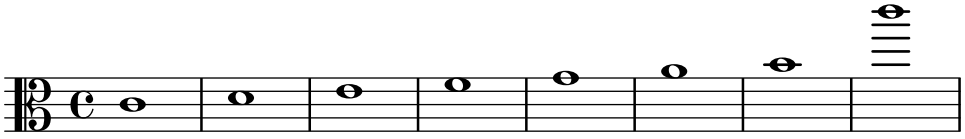

4. Scordatura, sounding mode. Expect, left to right: FLAT; FLAT then NO accidental (same-measure repeat suppressed); NO accidental (written sharp cancelled to natural by the retuning); plain (string 3 untouched).

4

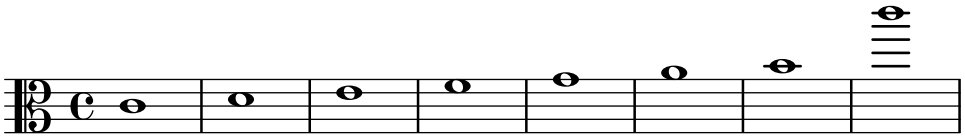

5. Viola, alto clef, plain scale. Baseline for score 6 -- no scordatura involved.

2
5

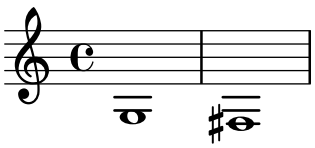

6. Same scale, identity-tuning scordatura. Expect: positions IDENTICAL to score 5, note for note.

6

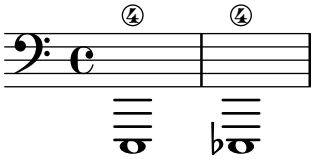

6b. Violin scordatura, string 4 G->F# (treble clef). Expect: bar 1 (fingered) plain G. Bar 2 (sounding) SHIFTS DOWN one staff step AND shows a SHARP -- notename changes, not just the accidental.

6b

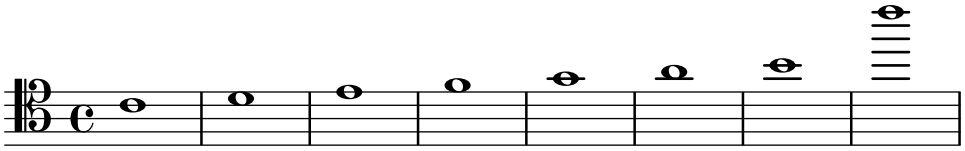

6c. Bass scordatura, string 4 E->Eb (bass clef). Expect: bar 1 (fingered) plain E. Bar 2 (sounding) SAME staff position, only a FLAT appears -- same notename, unlike 6b.

6c

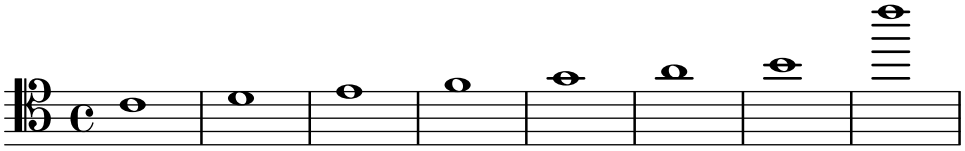

6d. Cello, tenor clef, plain scale. Baseline for score 6e -- tenor clef was untested before this session.

6d

6e. Same scale, tenor clef, identity-tuning scordatura. Expect: positions IDENTICAL to score 6d, note for note.

6e

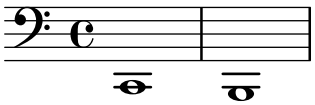

6f. Explicit \N must override the heuristic, not just decorate it. Cello, string 2 retuned D->Db, string 1 untouched. Both notes are the SAME written pitch (a). Expect: bar 1 (no string#, heuristic picks string 1) plain A. Bar 2 (explicit \2, forces the retuned string) a FLAT -- a DIFFERENT result, proving the override changes the actual transposition.

6f

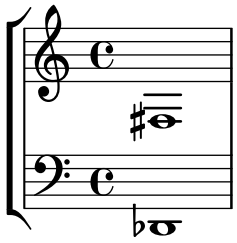

6g. Error paths: unknown instrument, unreachable pitch. Expect: two plain notes, NO crash. Check the COMPILE LOG (not this page) for two warnings -- unknown instrument, unreachable pitch -- since both error paths correctly leave the note looking like a normal one.

6g

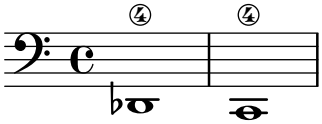

6h. Two instruments, two Staves, simultaneously. Different scordatura on violin (top) and cello (bottom), both sounding mode at once. Expect: TOP a SHARP, BOTTOM a FLAT -- independent, no leakage between Staves.

6h

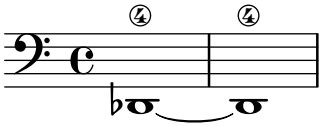

6i. Explicit \unscordatura clears the effect mid-block. Expect: bar 1 a FLAT. Bar 2 (right after \unscordatura, still inside \withScordatura) PLAIN -- no flat -- even though the string-4 circle keeps showing (that's just the \N glyph, independent of scordatura state).

6i

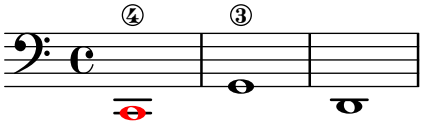

6j. Tie across two scordatura-transposed notes. Expect: a visible TIE CURVE connecting the two flat notes. (Previously rendered with no curve at all -- see strings.ily/TODO.md.)

6j

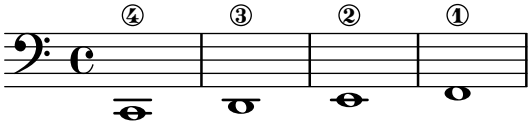

7. String colors, explicit numbers only. Expect: RED, black, black -- the third note has no string number (inference is off by default), so it stays the default color even though it's the same pitch class pattern as the others.

7

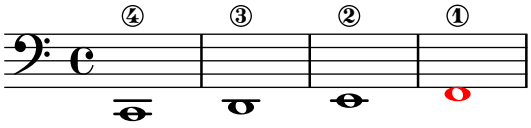

7b. Every built-in color scheme, plus one custom list. One row each, string 4/3/2/1 left to right: all-black, highlight-1, -2, -3, -4, highlight-1-4, highlight-all, rainbow, then a custom DeepPink/Gold/black/Cyan4 list. Expect each row's colors to match strings.ily's scheme definitions -- confirmed earlier via exact pixel RGB sampling, not just eyeballing.

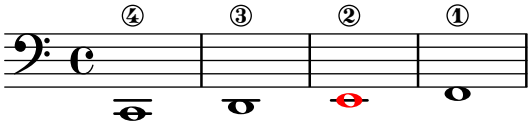

7b (all-black)

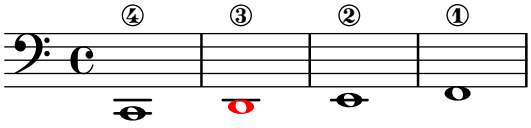

7b (highlight-1)

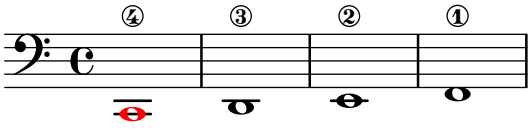

7b (highlight-2)

7b (highlight-3)

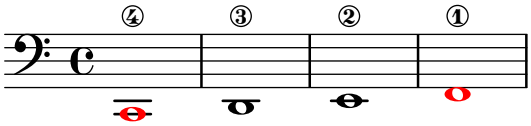

7b (highlight-4)

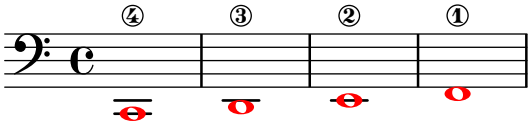

4

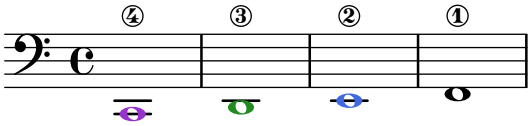

7b (highlight-1-4)

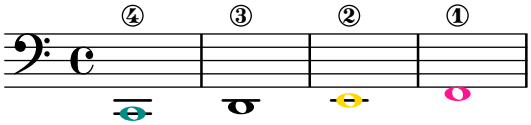

7b (highlight-all)

7b (rainbow)

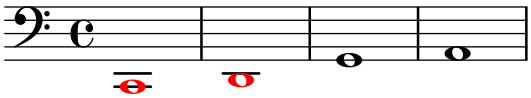

7b (custom: DeepPink/Gold/black/Cyan4)

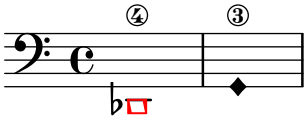

8. String colors with inference, all 4 strings. Expect: RED, RED (both only reachable on string 4), black, black (both only reachable on string 3) -- confirmed by hand fret arithmetic, not just eyeballing.

8

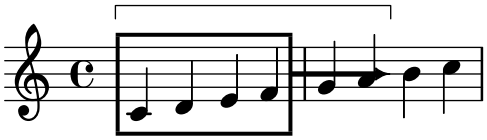

9. Scordatura + string colors + contact articulations together. Expect: a RED square (transposed AND colored AND squareHead, all on one note), then a black diamond (unchanged, colored, halfHarmonic).

9

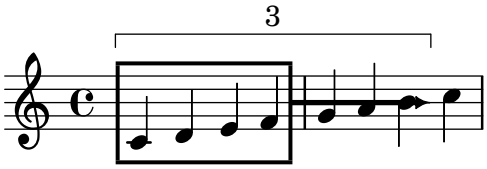

10. Frame engraver: box + extender line. Expect: a box around the first group of notes, then an arrow-tipped extender line continuing to the right.

10

10b. Frame with a text label. Expect: the same box, with '3' printed above the bracket.

10b

10c. Frame in repeat-barlines mode. Expect: repeat barlines (.|::|.) around the group instead of a box.

10c

10d. Frame with no-bracket (this project's house-style default). Expect: box + extender line, but NO bracket line and NO text above it.

10d

10e. Frame wrapping StringStaff contact-articulated notes. Matches the actual pattern used in 1m2.ily (\frameStart ... \square ... \frameEnd). Expect: a box around a square + diamond notehead, extender line continuing after.

10e

11. Integration: realistic multi-instrument passage. StaffGroup Vn/Vc (StringStaves) + Cb (plain Staff), standalone from project/. Expect, Vn: tie+arrow-span, then a diamond, then a frame box, then a square with accent/downbow/f. Expect, Vc: a RED square (color + squareHead together) tied across the barline, then a black diamond, then a note with \ss. Expect, Cb: repeat barlines, a suppressed rest, then two dynamics.

11
